Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number

PTO/SB/05 (4/98)

Approved for use through 09/30/2000 OMB 0651-0032

Patent and Trademark Office U.S. DEPARTMENT OF COMMERCE

**UTILITY  
PATENT APPLICATION  
TRANSMITTAL**

(Only for new nonprovisional applications under 37 CFR 1.53(b))

|  |                                       |
|--|---------------------------------------|
| Attorney Docket No.                      | 042390.P8629X                         |
| First Inventor or Application Identifier | Carl M. Ellison                       |
| Title                                    | ATTESTATION KEY MEMORY DEVICE AND BUS |
| Express Mail Label No.                   | EL466330900US                         |

**APPLICATION ELEMENTS**

See MPEP chapter 600 concerning utility patent application contents

ADDRESS TO: Assistant Commissioner for Patents  
Box Patent Application  
Washington, DC 20231

1. ☒ Fee Transmittal Form  
(Submit an original, and a duplicate for fee processing)
2. ☒ Specification [Total Pages 42]  
(preferred arrangement set forth below)
- Descriptive title of the Invention
  - Cross References to Related Applications
  - Statement Regarding Fed sponsored R & D
  - Reference to Microfiche Appendix
  - Background of the Invention
  - Brief Summary of the Invention
  - Brief Description of the Drawings (if filed)
  - Detailed Description
  - Claim(s)
  - Abstract of the Disclosure
3. ☒ Drawing(s) (35 U.S.C. 113) [Total Sheets 7]
4. Oath or Declaration [Total Pages 6]
- a. ☐ Newly executed (original copy)
  - b. ☐ Copy from a prior application (37 C.F.R. § 1.63(d))  
(for continuation/divisional with Box 16 completed)
  - i. ☐ **DELETION OF INVENTOR(S)**  
Signed statement attached deleting inventor(s) named in the prior application, see 37 CFR §§ 1.63(d)(2) and 1.33(b).

5. ☐ Microfiche Computer Program (Appendix)
6. Nucleotide and/or Amino Acid Sequence Submission  
(if applicable, all necessary)
- a. ☐ Computer Readable Copy
  - b. ☐ Paper Copy (identical to computer copy)
  - c. ☐ Statement verifying identity of above copies

**ACCOMPANYING APPLICATION PARTS**

7. ☐ Assignment Papers (cover sheet & document(s))
8. ☐ 37 C.F.R. § 3.73(b) Statement ☐ Power of Attorney  
(when there is an assignee)
9. ☐ English Translation Document (if applicable)
10. ☐ Information Disclosure Statement (IDS)/PTO - 1449 ☐ Copies of IDS Citations
11. ☐ Preliminary Amendment
12. ☒ Return Receipt Postcard (MPEP 503)  
(Should be specifically itemized)
13. ☐ \*Small Entity Statement(s) ☐ Statement filed in prior application, Status still proper and desired
14. ☐ Certified Copy of Priority Document(s)  
(if foreign priority is claimed)
15. ☐ Other: \_\_\_\_\_

\*NOTE FOR ITEMS 1 & 13 IN ORDER TO BE ENTITLED TO PAY SMALL ENTITY FEES, A SMALL ENTITY STATEMENT IS REQUIRED (37 C.F.R. § 1.27), EXCEPT IF ONE FILED IN A PRIOR APPLICATION IS RELIED UPON (37 C.F.R. § 1.28).

16. If a **CONTINUING APPLICATION**, check appropriate box, and supply the requisite information below and in a preliminary amendment.

☐ Continuation ☐ Divisional ☒ Continuation-in-part (CIP) of prior application No: 09/541,687

Prior application Information: Examiner \_\_\_\_\_

Group/Art Unit: \_\_\_\_\_

For **CONTINUATION** or **DIVISIONAL** APPS only. The entire disclosure of the prior application, from which an oath or declaration is supplied under Box 4b, is considered a part of the disclosure of the accompanying continuation or divisional application and is hereby incorporated by reference. The incorporation can only be relied upon when a portion has been inadvertently omitted from the submitted application parts

**17. CORRESPONDENCE ADDRESS**

☐ Customer Number of Bar Code Label

(Insert Customer No. or Attach bar code label here)

or ☒ Correspondence address below

|         |   |           |                |          |                |

**ATTESTATION KEY MEMORY DEVICE AND BUS**  
**RELATED APPLICATIONS**

This application is a continuation-in-part of application 09/541,687 filed March 31, 2000.

**BACKGROUND**

**1. Field of the Invention**

This invention relates to microprocessors. In particular, the invention relates to processor security.

**2. Description of Related Art**

Advances in microprocessor and communication technologies have opened up many opportunities for applications that go beyond the traditional ways of doing business. Electronic commerce (E-commerce) and business-to-business (B2B) transactions are now becoming popular, reaching the global markets at a fast rate. Unfortunately, while modern microprocessor systems provide users convenient and efficient methods of doing business, communicating and transacting, they are also vulnerable to unscrupulous attacks. Examples of these attacks include virus, intrusion, security breach, and tampering, to name a few. Computer security, therefore, is becoming more and more important to protect the integrity of the computer systems and increase the trust of users.

Threats caused by unscrupulous attacks may be in a number of forms. Attacks may be remote without requiring physical accesses. An invasive remote-launched attack by hackers may disrupt the normal operation of a system connected to thousands or even millions of users. A virus program may corrupt code and/or data of a single-user platform.

Existing techniques to protect against attacks have a number of drawbacks. Anti-virus programs can only scan and detect known viruses.

## **BRIEF DESCRIPTION OF THE DRAWINGS**

The features and advantages of the present invention will become apparent from the following detailed description of the present invention in which:

Figure 1A is a diagram illustrating a logical architecture according to one embodiment of the invention.

Figure 1B is a diagram illustrating accessibility of various elements in the operating system and the processor according to one embodiment of the invention.

Figure 1C is a diagram illustrating a computer system in which one embodiment of the invention can be practiced.

Figure 2 is a diagram illustrating the token bus interface shown in Figure 1C according to one embodiment of the invention.

Figure 3 is a diagram illustrating the configuration storage shown in Figure 2 according to one embodiment of the invention.

Figure 4 is a diagram illustrating the signing operation shown in Figure 3 according to one embodiment of the invention.

Figure 5 is a diagram illustrating the status register shown in Figure 3 according to one embodiment of the invention.

## DETAILED DESCRIPTION

In the following description, for purposes of explanation, numerous details are set forth in order to provide a thorough understanding of the present invention. However, it will be apparent to one skilled in the art that these specific details are not required in order to practice the present invention. In other instances, well-known electrical structures and circuits are shown in block diagram form in order not to obscure the present invention.

## ARCHITECTURE OVERVIEW

One principle for providing security in a computer system or platform is the concept of an isolated execution architecture. The isolated execution architecture includes logical and physical definitions of hardware and software components that interact directly or indirectly with an operating system of the computer system or platform. An operating system and the processor may have several levels of hierarchy, referred to as rings, corresponding to various operational modes. A ring is a logical division of hardware and software components that are designed to perform dedicated tasks within the operating system. The division is typically based on the degree or level of privilege, namely, the ability to make changes to the platform. For example, a ring-0 is the innermost ring, being at the highest level of the hierarchy. Ring-0 encompasses the most critical, privileged components. In addition, modules in Ring-0 can also access to lesser privileged data, but not vice versa. Ring-3 is the outermost ring, being at the lowest level of the hierarchy. Ring-3 typically encompasses users or applications level and executes the least trusted code. It is noted that the level of the ring hierarchy is independent to the level of the security protection of that ring.

Figure 1A is a diagram illustrating a logical operating architecture 50 according to one embodiment of the invention. The logical operating

The isolated execution ring-0 15, including the OS nub 16 and the processor nub 18, can access to both of the isolated area 70, including the applet pages 72 and the nub pages 74, and the non-isolated area 80, including the application pages 82 and the OS pages 84. The isolated execution ring-3 45, including applets 46<sub>1</sub> to 46<sub>K</sub>, can access only applet pages 72. The applets 46<sub>1</sub> to 46<sub>K</sub> reside in the isolated area 70. In general, applets can only access their own pages; however, the OS nub 16 can also provides services for the applet to share memory (e.g., share memory with other applets or with non-isolated area applications).

Figure 1C is a diagram illustrating a computer system 100 in which one embodiment of the invention can be practiced. The computer system 100 includes a processor 110, a host bus 120, a memory controller hub (MCH) 130, a system memory 140, an input/output controller hub (ICH) 150, a non-volatile memory, or system flash, 160, a mass storage device 170, input/output devices 175, a token bus 180, a motherboard (MB) token 182, a reader 184, and a token 186. The MCH 130 may be integrated into a chipset that integrates multiple functionalities such as the isolated execution mode, host-to-peripheral bus interface, memory control. Similarly, the ICH 150 may also be integrated into a chipset together or separate from the MCH 130 to perform I/O functions. For clarity, not all the peripheral buses are shown. It is contemplated that the system 100 may also include peripheral buses such as Peripheral Component Interconnect (PCI), accelerated graphics port (AGP), Industry Standard Architecture (ISA) bus, and Universal Serial Bus (USB), etc. The "token bus" may be part of the USB bus, e.g., it may be hosted on the USB bus.

The processor 110 represents a central processing unit of any type of architecture, such as complex instruction set computers (CISC), reduced instruction set computers (RISC), very long instruction word (VLIW), or hybrid

architecture. In one embodiment, the processor 110 is compatible with an Intel Architecture (IA) processor, such as the Pentium™ series, the IA-32™ and the IA-64™. The processor 110 includes a normal execution mode 112 and an isolated execution circuit 115. The normal execution mode 112 is the mode in which the processor 110 operates in a non-secure environment, or a normal environment without the security features provided by the isolated execution mode. The isolated execution circuit 115 provides a mechanism to allow the processor 110 to operate in an isolated execution mode. The isolated execution circuit 115 provides hardware and software support for the isolated execution mode. This support includes configuration for isolated execution, definition of an isolated area, definition (e.g., decoding and execution) of isolated instructions, generation of isolated access bus cycles, and access checking.

In one embodiment, the computer system 100 can be a single processor system, such as a desktop computer, which has only one main central processing unit, e.g. processor 110. In other embodiments, the computer system 100 can include multiple processors, e.g. processors 110, 110a, 110b, etc., as shown in Figure 1C. Thus, the computer system 100 can be a multi-processor computer system having any number of processors. For example, the multi-processor computer system 100 can operate as part of a server or workstation environment. The basic description and operation of processor 110 will be discussed in detail below. It will be appreciated by those skilled in the art that the basic description and operation of processor 110 applies to the other processors 110a and 110b, shown in Figure 1C, as well as any number of other processors that may be utilized in the multi-processor computer system 100 according to one embodiment of the present invention.

aborts any access to the isolated area that does not have the isolated access bus mode asserted.

The system memory 140 stores system code and data. The system memory 140 is typically implemented with dynamic random access memory (DRAM) or static random access memory (SRAM). The system memory 140 includes the accessible physical memory 60 (shown in Figure 1B). The accessible physical memory includes a loaded operating system 142, the isolated area 70 (shown in Figure 1B), and an isolated control and status space 148. The loaded operating system 142 is the portion of the operating system that is loaded into the system memory 140. The loaded OS 142 is typically loaded from a mass storage device via some boot code in a boot storage such as a boot read only memory (ROM). The isolated area 70, as shown in Figure 1B, is the memory area that is defined by the processor 110 when operating in the isolated execution mode. Access to the isolated area 70 is restricted and is enforced by the processor 110 and/or the MCH 130 or other chipset that integrates the isolated area functionalities. The isolated control and status space 148 is an input/output (I/O)-like, independent address space defined by the processor 110. The isolated control and status space 148 contains mainly the isolated execution control and status registers. The isolated control and status space 148 does not overlap any existing address space and is accessed using the isolated bus cycles. The system memory 140 may also include other programs or data that are not shown.

The ICH 150 represents a known single point in the system having the isolated execution functionality. For clarity, only one ICH 150 is shown. The system 100 may have many ICH's similar to the ICH 150. When there are multiple ICH's, a designated ICH is selected to control the isolated area configuration and status. In one embodiment, this selection is performed by an external strapping pin. As is known by one skilled in the art, other

execution logical processor manager 156 manages the operation of logical processors configuring their isolated execution mode support. In one embodiment, the isolated execution logical processor manager 156 includes a logical processor count register that tracks the number of logical processors participating in the isolated execution mode. The token bus interface 159 interfaces to the token bus 180. A combination of the processor nub loader digest, the processor nub digest, the operating system nub digest, and optionally additional digests, represents the overall isolated execution digest, referred to as isolated digest. The isolated digest is a fingerprint identifying the all supervisory code involved in controlling the isolated execution configuration and operation. The isolated digest is used to attest the state of the current isolated execution and to prove the validity of the software loaded into the isolated area..

The non-volatile memory 160 stores non-volatile information. Typically, the non-volatile memory 160 is implemented in flash memory. In one embodiment, the non-volatile memory 160 includes the processor nub 18. The processor nub 18 provides set-up and low-level management of the isolated area 70 (in the system memory 140), including verification, loading, and logging of the operating system nub 16, and the management of the symmetric key used to protect the operating system nub's secrets. The processor nub loader 52 performs some part of the setup and manages/updates the symmetric key before the processor nub 18 and the OS nub 16 are loaded. The processor nub 18 The processor nub 18 may also provide interface abstractions to low-level security services provided by other hardware. The processor nub 18 may also be distributed by the original equipment manufacturer (OEM) or operating system vendor (OSV).

The mass storage device 170 stores archive information such as code (e.g., processor nub 18), programs, files, data, applications (e.g., applications

42<sub>1</sub> to 42<sub>N</sub>), applets (e.g., applets 46<sub>1</sub> to 46<sub>K</sub>) and operating systems. The mass storage device 170 may include compact disk (CD) ROM 172, floppy diskettes 174, and hard drive 176, and any other storage devices. The mass storage device 170 provides a mechanism to read machine-readable media. When implemented in software, the elements of the present invention are the code segments to perform the necessary tasks. The program or code segments can be stored in a processor readable medium or transmitted by a computer data signal embodied in a carrier wave, or a signal modulated by a carrier, over a transmission medium. The "processor readable medium" may include any medium that can store or transfer information. Examples of the processor readable medium include an electronic circuit, a semiconductor memory device, a ROM, a flash memory, an erasable programmable ROM (EPROM), a floppy diskette, a compact disk CD-ROM, an optical disk, a hard disk, a fiber optical medium, a radio frequency (RF) link, etc. The computer data signal may include any signal that can propagate over a transmission medium such as electronic network channels, optical fibers, air, electromagnetic, RF links, etc. The code segments may be downloaded via computer networks such as the Internet, an Intranet, etc.

I/O devices 175 may include any I/O devices to perform I/O functions. Examples of I/O devices 175 include a controller for input devices (e.g., keyboard, mouse, trackball, pointing device), media card (e.g., audio, video, graphics), a network card, and any other peripheral controllers.

The token bus 180 provides an interface between the ICH 150 and various tokens in the system. A token is a device that performs dedicated input/output functions with security functionalities. A token has characteristics similar to a smart card, including at least one reserved-purpose public/private key pair and the ability to sign data with the private key. Examples of tokens connected to the token bus 180 include a motherboard token 182, a token

reader 184, and other portable tokens 186 (e.g., smart card). The token bus interface 159 in the ICH 150 connects through the token bus 180 to the ICH 150 and ensures that when commanded to prove the state of the isolated execution, the corresponding token (e.g., the motherboard token 182, the token 186) signs only valid isolated digest information. For purposes of security, the token should be connected to the digest memory via the token bus 180.

### ATTESTATION KEY MEMORY (AKM) DEVICE AND BUS

In an embodiment of the present invention, a technique is provided for remote attestation. The remote attestation is performed by a device operating in a remote manner with respect to the MCH 130 and the ICH 150 (Figure 1C). Examples of this device include one of the tokens 186. This device is referred to as an attestation key memory (AKM) device. This remote attestation is performed by using a public-private key pair to attest that the isolated execution mode is running with a particular software configuration. Depending on the need of the software utilizing the attestation, the results can be bonded to the platform embodying the secure environment such that future attestation is not required unless there is a significant change in the software configuration. The AKM device contains one or more key pair and may be inserted into the platform by the end user needed to perform the attestation.

The AKM device allows a user to validate the integrity of the isolated area. It able to use the hardware to validate the state of the software. The AKM device provide a simple model for users to understand when there are privacy and anonymity issues. In addition, the AKM device offers some advantages and benefits over a non-pluggable device approach. It also prevents spoofing by emulation software. The AKM device remotely attests

by getting the state of the software broadcast to the remote server. This is done by the NUB and some network interface.

The benefits of using an AKM device includes: distribution of the private key, replacement or removal of the private key if desired, usage of more than one key if desired, remote verification of software on an unknown machine by a remote server, provision of value-added features via the interface bus (e.g., the token bus 180 shown in Figure 1C). The AKM device may be removed or fixed on the motherboard.

In an embodiment of the present invention, an interface maps a device (e.g., the AKM device) via a bus (e.g., the token bus 180 shown in Figure 1C) to an address space of a chipset (e.g., the ICH 150 shown in Figure 1C) in a secure environment for an isolated execution mode. The secure environment is associated with an isolated memory area accessible by at least one processor. A communication storage corresponding to the address space allows the device to exchange security information with the at least one processor in the isolated execution mode in a remote attestation.

Figure 2 is a diagram illustrating the token bus interface 159 shown in Figure 1C according to one embodiment of the invention. The token bus interface 159 includes an interface 210, a communication storage 220, and a chipset storage 270.

The interface 210 provides an interface between an external device (e.g., the tokens 186 shown in Figure 1C) coupled to the token bus 180 (Figure 1C and the chipset (e.g., the ICH 150)). The interface 210 includes a decoder 212. The decoder 212 decodes the address space onto the bus 180 so that an access to the chipset is passed to the external device. Typically the address space is a subset of the address space of the chipset 150. In

addition, the decoder 212 allows the device 186 to access the chipset storage 270.

The communication storage 220 is mapped to the address space and allows the device 186 to exchange security information with the chipset 150 or the processor 110. The communication storage 220 includes a configuration storage 230, a status register 240, a command register 250, and an input/output block (IOB) 260. The configuration storage 230 stores configuration information 232. The status register 240 stores device status 242. The command register 250 stores device command 252. The IOB 260 stored input data 262 and output data 264.

The chipset storage 270 stores chipset information such as the system digest in the digest memory 154 (Figure 1C). In particular, the chipset storage 270 includes a processor nub loader hash 272, a chipset hash log 274, a software hash 276, and a nonce 278. The processor nub loader hash 272 and the chipset hash log 274 can be read directly by the AKM device 186 and cannot be intercepted by the running software. The software hash 276 and the nonce 278 are provided by the processor nub 18 (Figure 1A). Furthermore, additional hash registers may be provided for other software hashes.

Figure 3 is a diagram illustrating the configuration storage 230 shown in Figure 2 according to one embodiment of the invention. The configuration storage 230 includes a manufacturer identifier 310, a revision identifier 320, an interface set identifier 330, a static public key 340, and a static key certificate 350. The configuration storage includes a plurality of sub-storages (e.g., public key storage, key certificate storage, interface set storage, revision storage). Typically, the configuration storage 230 is read-only. This device can be attached to the bus 180 and made removable. A removable device is important for proving a platform.

The manufacturer identifier 310 identifies the manufacturer of the AKM device 186. The revision identifier 320 provides a revision number of the AKM device 186. The interface set identifier 330 identifies the interface set that is supported by the device 186. The static public key 340 is a public key with a short key identification. The key certificate 350 is a key certificate with a short key identification.

The interface set identified by the interface set identifier 330 identifies may include an initialization set 360, an attestation set 370, and a device interface set 380. For a typical remote attestation, the initialization set 360 is needed. The initialization set 360 may be hardcoded and is used to reset and initialize the device. The initialization set 360 includes an idle state 362, a reset command 364, a connect command 366, and a reserved operation 368. The idle state 362 indicates that the device is not performing any meaningful operation and is idle. The reset command 364 causes the device to reset and perform a self-test operation. The connect command 366 sets the connect bit in the status register 240. The reserved operation 368 is to be reserved for other operations or commands or for non-implemented operation. A command that corresponds to the reserved operation 368 results in a "not-supported" error.

The attestation set 370 includes a signing operation 372, a public key enumeration 374, and a key certificate enumeration 376. The signing operation 372 provides the remote attestation to verify the validity of the platform running a particular software in the secure environment. The public key enumeration 374 enumerates any additional public keys that are not part of the static configuration information 232 (shown in Figure 2). The key certificate enumeration 376 enumerates any additional key certificates that are not part of the static configuration information 232 (shown in Figure 2).

The device interface set 380 is any additional interface set that can be supported by the AKM device in addition to the initialization set 360 and the attestation set 370.

When the device receives a command, it performs the operation as specified. During this time, the device may update the status register to report any conditions. When the operation is completed, the device writes the result in the IOB 260, clears a time estimate in the status register (discussed below), and clears the command register. When the host processor 110 polls the command register, a zero value indicates the device is idle. The processor 110 then can check the status register 240 for any device fatal error. If there is no fatal error, the host then reads the results from the IOB 260. Alternatively, the device can read the registers and decide whether or not the platform is safe.

Figure 4 is a diagram illustrating the signing operation 372 shown in Figure 3 according to one embodiment of the invention. The signing operation 372 includes a hash function 410 and a cryptographic function 420.

The hash function 410 performs hashing on the processor nub loader hash 272, the chipset hash log 274, the software hash 276, and the nonce 278. The result of this hashing operation is then encrypted by the cryptographic function 420 using the private key 280 stored in the chipset. The result of the encryption becomes the output data 264 to be stored in the IOB 260. When the signing operation 372 is complete, the processor nub 18 retrieves the result from the IOB 260.

Figure 5 is a diagram illustrating the status register shown in Figure 3 according to one embodiment of the invention. The status register 240 includes a self-test field 510, a connection field 520, an estimate field 530, and a reserved field 540.

The self-test field 510 provides a result of the self-test operation in response to the reset command. The result may include a failure. When there is a failure, all results from the device are ignored. This failure code is typically reset by a reset command or a system reset. The connection field 520 indicates that the device is responsive to the connect command. The estimate field 530 provides an estimate in some time unit (e.g., milliseconds) to indicate how long a current operation is expected to take. For example, a value zero indicates that it is less than a millisecond to complete. The reserved field 540 is reserved for future use.

While this invention has been described with reference to illustrative embodiments, this description is not intended to be construed in a limiting sense. Various modifications of the illustrative embodiments, as well as other embodiments of the invention, which are apparent to persons skilled in the art to which the invention pertains are deemed to lie within the spirit and scope of the invention.

## CLAIMS

What is claimed is:

- 1           1.       An apparatus comprising:
  - 2               an interface to map a device via a bus to an address space of a chipset in
  - 3               a secure environment for an isolated execution mode, the secure environment
  - 4               being associated with an isolated memory area accessible by at least one
  - 5               processor, the at least one processor operating in one of a normal execution
  - 6               mode and the isolated execution mode; and
  - 7               a communication storage corresponding to the address space to allow the
  - 8               device to exchange security information with the at least one processor in the
  - 9               isolated execution mode in a remote attestation.
- 1           2.       The apparatus of claim 1 wherein the security information includes
- 2               at least one of a static public key and a static key certificate.
- 1           3.       The apparatus of claim 2 wherein the interface comprises:
  - 2               a decoder to decode the address space onto the bus so that an access to
  - 3               the chipset is passed to the device.
- 1           4.       The apparatus of claim 3 wherein the device accesses a chipset
- 2               storage via the address space.

1           5.     The apparatus of claim 4 wherein the communication storage  
2 comprises:

3           a configuration storage to store device configuration information.

1           6.     The apparatus of claim 5 wherein the communication storage  
2 further comprises:

3           a status register to store device status of the device;

4           a command register to store a device command for a command interface  
5 set; and

6           an input/output block (IOB) to store input and output data corresponding  
7 to the command.

1           7.     The apparatus of claim 6 wherein the configuration storage  
2 comprises:

3           a public key storage to store the static public key;

4           a key certificate storage to store the static key certificate; and

5           an interface set storage to store an interface set identifier, the interface  
6 set identifier identifying a command interface set supported by the device.

1           8.     The apparatus of claim 7 wherein the configuration storage further  
2 comprises:

3           a manufacturer identifier storage to store a manufacturer identifier; and  
4           a revision storage to store a revision identifier.

1           9.     The apparatus of claim 7 wherein the command interface set is an  
2 initialization set, the initialization set supporting a reset command and a connect  
3 command.

1           10.    The apparatus of claim 7 wherein the command interface set is an  
2 attestation set, the attestation set performing at least one of a public key  
3 enumeration, a key certificate enumeration, and a signing operation.

1           11.    The apparatus of claim 10 wherein the status register comprises:  
2           a connection field to provide a connection status to indicate that the  
3 device is responsive to the connect command; and  
4           an estimate field to provide an estimate of processing time for an  
5 operation specified in the command.

1           12.    The apparatus of claim 11 wherein the status register further  
2 comprises:  
  
3           a self-test field to indicate status of a self test in response to the reset  
4 command.

1           13.    The apparatus of claim 10 wherein the public key enumeration  
2 enumerates an additional public key other than the static public key.

1           14.    The apparatus of claim 10 wherein the key certificate enumeration  
2 enumerates an additional key certificate other than the static key certificate.

1           15.    The apparatus of claim 10 wherein the sign operation generates a  
2 signature to attest validity of the secure environment using a private key provided  
3 by the chipset.

1           16.    The apparatus of claim 15 wherein the signature corresponds to  
2 signing a chipset parameter.

1            17.    The apparatus of claim 16 wherein the chipset parameter is one of  
2    a chipset isolated nub loader hash, a chipset isolated hash log, a software hash,  
3    and a nonce.

1            18.    The apparatus of claim 17 wherein the chipset isolated nub loader  
2    hash and the chipset isolated hash log are stored in the chipset storage.

1            19.    The apparatus of claim 18 wherein the software hash and the  
2    nonce are provided by a process nub.

1            20.    The apparatus of claim 3 wherein the device accesses a remote  
2    server via the address space.

1            21.    A method comprising:  
  
2            mapping a device via a bus to an address space of a chipset in a secure  
3    environment for an isolated execution mode, the secure environment being  
4    associated with an isolated memory area accessible by at least one processor,  
5    the at least one processor operating in one of a normal execution mode and the  
6    isolated execution mode; and

7            exchanging security information between the device and the at least one  
8   processor in the isolated execution mode in a remote attestation via a  
9   communication storage corresponding to the address space.

1            22.    The method of claim 21 wherein the security information includes  
2   at least one of a static public key and a static key certificate.

1            23.    The method of claim 22 wherein mapping comprises:  
2            decoding the address space onto the bus so that an access to the chipset  
3   is passed to the device.

1            24.    The method of claim 23 wherein the device accesses a chipset  
2   storage via the address space.

1            25.    The method of claim 24 wherein exchanging comprises:  
2            storing device configuration information in a configuration storage.

1            26.    The method of claim 25 wherein exchanging further comprises:  
2            storing device status of the device in a status register;

3 performing a device command corresponding to a command interface set  
4 to a command register; and  
  
5 storing input and output data corresponding to the command in an  
6 input/output block (IOB).

1 27. The method of claim 26 wherein storing in the configuration storage  
2 comprises:

3 storing the static public key in a public key storage;  
  
4 storing the static key certificate in a key certificate storage; and  
  
5 storing an interface set identifier in an interface set storage, the interface  
6 set identifier identifying a command interface set supported by the device.

1 28. The method of claim 27 wherein storing in the configuration storage  
2 further comprises:

3 storing a manufacturer identifier in a manufacturer identifier storage; and  
  
4 storing a revision identifier in a revision storage.

1 29. The method of claim 27 wherein performing the device command  
2 comprises performing a reset command and a connect command corresponding  
3 to an initialization set.

1           30.    The method of claim 27 wherein performing the device command  
2   comprises performing at least one of a public key enumeration, a key certificate  
3   enumeration, and a signing operation, the public key enumeration, the key  
4   certificate enumeration, and the signing operation corresponding to an  
5   attestation set.

1           31.    The method of claim 30 wherein storing the device status  
2   comprises:  
3           providing a connection status to indicate that the device is responsive to  
4   the connect command; and  
5           providing an estimate of processing time for an operation specified in the  
6   command.

1           32.    The method of claim 31 wherein storing the device status further  
2   comprises:  
3           indicating status of a self test in response to the reset command.

1           33.    The method of claim 30 wherein performing the public key  
2   enumeration comprises enumerating an additional public key other than the  
3   static public key.

35. The method of claim 30 wherein performing the sign operation comprises generating a signature to attest validity of the secure environment using a private key provided by the chipset.

1            36.    The method of claim 35 wherein the signature corresponds to  
2    signing a chipset parameter.

1           37.     The method of claim 36 wherein the chipset parameter is one of a  
2     chipset isolated nub loader hash, a chipset isolated hash log, a software hash,  
3     and a nonce.

1           38.    The method of claim 37 wherein the chipset isolated nub loader  
2   hash and the chipset isolated hash log are stored in the chipset storage.

1           39.    The method of claim 38 wherein the software hash and the nonce  
2   are provided by a process nub.

1           40.    The method of claim 23 wherein the device accesses a remote  
2   server via the address space.

1           41.    A computer program product comprising:  
2           a machine readable medium having program code embedded therein, the  
3   computer program product comprising:

4           computer readable program code for mapping a device via a bus to an  
5   address space of a chipset in a secure environment for an isolated execution  
6   mode, the secure environment being associated with an isolated memory area  
7   accessible by at least one processor, the at least one processor operating in one  
8   of a normal execution mode and the isolated execution mode; and

9           computer readable program code for exchanging security information  
10   between the device and the at least one processor in the isolated execution  
11   mode in a remote attestation via a communication storage corresponding to the  
12   address space.

1           42.    The computer program product of claim 41 wherein the security  
2 information includes at least one of a static public key and a static key certificate.

1           43.    The computer program product of claim 42 wherein the computer  
2 readable program code for mapping comprises:

3           computer readable program code for decoding the address space onto  
4 the bus so that an access to the chipset is passed to the device.

1           44.    The computer program product of claim 43 wherein the device  
2 accesses a chipset storage via the address space.

1           45.    The computer program product of claim 44 wherein the computer  
2 readable program code for exchanging comprises:

3           computer readable program code for storing device configuration  
4 information in a configuration storage.

1           46.    The computer program product of claim 45 wherein the computer  
2 readable program code for exchanging further comprises:

3 computer readable program code for storing device status of the device in  
4 a status register;

5 computer readable program code for performing a device command  
6 corresponding to a command interface set to a command register; and

7 computer readable program code for storing input and output data  
8 corresponding to the command in an input/output block (IOB).

1 47. The computer program product of claim 46 wherein the computer  
2 readable program code for storing in the configuration storage comprises:

3 computer readable program code for storing the static public key in a  
4 public key storage;

5 computer readable program code for storing the static key certificate in a  
6 key certificate storage; and

7 computer readable program code for storing an interface set identifier in  
8 an interface set storage, the interface set identifier identifying a command  
9 interface set supported by the device.

1 48. The computer program product of claim 47 wherein the computer  
2 readable program code for storing in the configuration storage further comprises:

3 computer readable program code for storing a manufacturer identifier in a  
4 manufacturer identifier storage; and

5 computer readable program code for storing a revision identifier in a  
6 revision storage.

1 49. The computer program product of claim 47 wherein the computer  
2 readable program code for performing the device command comprises  
3 performing a reset command and a connect command corresponding to an  
4 initialization set.

1 50. The computer program product of claim 47 wherein the computer  
2 readable program code for performing the device command comprises  
3 performing at least one of a public key enumeration, a key certificate  
4 enumeration, and a signing operation, the public key enumeration, the key  
5 certificate enumeration, and the signing operation corresponding to an  
6 attestation set.

1 51. The computer program product of claim 50 wherein the computer  
2 readable program code for storing the device status comprises:

3 computer readable program code for providing a connection status to  
4 indicate that the device is responsive to the connect command; and

5 computer readable program code for providing an estimate of processing  
6 time for an operation specified in the command.

1           52.    The computer program product of claim 51 wherein the computer  
2   readable program code for storing the device status further comprises:  
  
3           computer readable program code for indicating status of a self test in  
4   response to the reset command.

1           53.    The computer program product of claim 50 wherein the computer  
2   readable program code for performing the public key enumeration comprises  
3   enumerating an additional public key other than the static public key.

1           54.    The computer program product of claim 50 wherein the computer  
2   readable program code for performing the key certificate enumeration comprises  
3   enumerating an additional key certificate other than the static key certificate.

1           55.    The computer program product of claim 50 wherein the computer  
2   readable program code for performing the sign operation comprises generating a  
3   signature to attest validity of the secure environment using a private key provided  
4   by the chipset.

1           56.    The computer program product of claim 55 wherein the signature  
2   corresponds to signing a chipset parameter.

1           65.    The system of claim 64 wherein the communication storage  
2 comprises:  
3           a configuration storage to store device configuration information.

1           66.    The system of claim 65 wherein the communication storage further  
2 comprises:  
3           a status register to store device status of the device;  
4           a command register to store a device command for a command interface  
5 set; and  
6           an input/output block (IOB) to store input and output data corresponding  
7 to the command.

1           67.    The system of claim 66 wherein the configuration storage  
2 comprises:  
3           a public key storage to store the static public key;  
4           a key certificate storage to store the static key certificate; and  
5           an interface set storage to store an interface set identifier, the interface  
6 set identifier identifying a command interface set supported by the device.

1           68.    The system of claim 67 wherein the configuration storage further  
2 comprises:

3           a manufacturer identifier storage to store a manufacturer identifier; and  
4           a revision storage to store a revision identifier.

1           69.    The system of claim 67 wherein the command interface set is an  
2 initialization set, the initialization set supporting a reset command and a connect  
3 command.

1           70.    The system of claim 67 wherein the command interface set is an  
2 attestation set, the attestation set performing at least one of a public key  
3 enumeration, a key certificate enumeration, and a signing operation.

1           71.    The system of claim 70 wherein the status register comprises:

2           a connection field to provide a connection status to indicate that the  
3 device is responsive to the connect command; and

4           an estimate field to provide an estimate of processing time for an  
5 operation specified in the command.

1           72.    The system of claim 71 wherein the status register further  
2 comprises:  
3           a self-test field to indicate status of a self test in response to the reset  
4 command.

1           73.    The system of claim 70 wherein the public key enumeration  
2 enumerates an additional public key other than the static public key.

1           74.    The system of claim 70 wherein the key certificate enumeration  
2 enumerates an additional key certificate other than the static key certificate.

1           75.    The system of claim 70 wherein the sign operation generates a  
2 signature to attest validity of the secure environment using a private key provided  
3 by the chipset.

1           76.    The system of claim 75 wherein the signature corresponds to  
2 signing a chipset parameter.

1           80.    The system of claim 63 wherein the device accesses a remote  
2   server via the address space.

## ABSTRACT OF THE DISCLOSURE

In an embodiment of the present invention, a technique is provided for remote attestation. An interface maps a device via a bus to an address space of a chipset in a secure environment for an isolated execution mode. The secure environment is associated with an isolated memory area accessible by at least one processor. The at least one processor operates in one of a normal execution mode and the isolated execution mode. A communication storage corresponding to the address space allows the device to exchange security information with the at least one processor in the isolated execution mode in a remote attestation.

## DECLARATION AND POWER OF ATTORNEY FOR PATENT APPLICATION (CONTINUATION-IN-PART)

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below, next to my name.

I believe I am the original, first, and sole inventor (if only one name is listed below) or any original, first, and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled

### ATTESTATION KEY MEMORY DEVICE AND BUS

the specification of which

☒ is attached hereto.  
☐ was filed on \_\_\_\_\_ as  
 United States Application Number \_\_\_\_\_  
 or PCT International Application Number \_\_\_\_\_  
 and was amended on \_\_\_\_\_  
 (if applicable)

That this application in part discloses and claims subject matter disclosed in my earlier filed pending application:

Application No.: 09/541,687  
 Filed: 3/31/2000

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

That as to the subject matter of this application which is common to said earlier application, I do not know and do not believe that the same was ever known or used in the United States of America before my invention thereof, or patented or described in any printed publication in any country before my invention thereof or more than one year prior to this application, that the same was not in public use or on sale in the United States of America more than one year prior to this application, and

That said common subject matter has not been patented or made the subject of an inventor's certificate issued before the date of said earlier application in any country foreign to the United States of America on an application filed by me or my legal representatives or assigns more than twelve months prior to said earlier application;

I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations, Section 1.56.

I hereby claim foreign priority benefits under Title 35, United States Code, Section 119, of any foreign application(s) for patent or inventor's certificate listed below and have also identified below any foreign application for patent or inventor's certificate having a filing date before that of the application on which priority is claimed:

| APPLICATION<br>NUMBER | COUNTRY (OR<br>INDICATE IF PCT) | DATE OF FILING<br>(day, month, year) | PRIORITY CLAIMED<br>UNDER 37 USC 119                     |
|-----------------------|---------------------------------|--------------------------------------|--|
|                       |                                 |                                      | <input type="checkbox"/> No <input type="checkbox"/> Yes |
|                       |                                 |                                      | <input type="checkbox"/> No <input type="checkbox"/> Yes |
|                       |                                 |                                      | <input type="checkbox"/> No <input type="checkbox"/> Yes |

I hereby claim the benefit under Title 35, United States Code, Section 120 of any United States application(s) listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States application in the manner provided by the first paragraph of Title 35, United States Code, Section 112, I acknowledge the duty to disclose all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, Section 1.56 which became available between the filing date of the prior application and the national or PCT international filing date of this application:

| APPLICATION<br>NUMBER | FILING DATE | STATUS (ISSUED,<br>PENDING, ABANDONED) |
|-----------------------|-------------|--|
|                       |             |  |
|                       |             |  |
|                       |             |  |

I hereby appoint the persons listed on Appendix A hereto (which is incorporated by reference and a part of this document) as my respective patent attorneys and patent agents, with full power of substitution and revocation, to prosecute this application and to transact all business in the Patent and Trademark Office connected herewith.

Send correspondence to:

Thinh V. Nguyen, Reg. No. 42,034, BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN, LLP  
(Name of Attorney or Agent)  
12400 Wilshire Boulevard, 7th Floor, Los Angeles, California 90025 and direct telephone calls to:  
Thinh V. Nguyen, (714) 557-3800.  
(Name of Attorney or Agent)

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.
